

COURSE EQUIVALENCY BUILDER

Course Equivalency Builder™ (CEB™) was designed as the ultimate solution to course equivalency and transfer credit issues among institutions of higher learning. CEB™ works along side DARS and CAS to provide the optimum method of researching, tracking, and approving new course equivalents. Using our proprietary CASSET inference engine, CEB™ tells administrators what courses are equivalent, reciprocally equivalent, and it even recommends courses for equivalence that have not yet been declared as equivalent with similar course.

One of the friendliest features of CEB™ is that it allows the administration of your course equivalents to be under the control of approved academic/admin leaders in your institution and not the Information Technology department. Easy and quick updates can be made to course equivalencies.

CEB™ not only allows the user to search on and display equivalent courses, it also has been designed to aid school administration in rapidly identifying, researching and approving new course equivalents using Windsor Software's powerful, proprietary inference engine.

Additionally, CEB™ offers the following features:

- | | |
|--|--|
| <input checked="" type="checkbox"/> Virtual Common Course Numbering System | <input checked="" type="checkbox"/> Reports Reciprocally Equivalent Courses |
| <input checked="" type="checkbox"/> Tracks Course Equivalency Metrics | <input checked="" type="checkbox"/> Infers Additional Equivalent Courses |
| <input checked="" type="checkbox"/> Reports Equivalent Courses | <input checked="" type="checkbox"/> Built-in Access Control Functions |
| <input checked="" type="checkbox"/> Course Equivalencies controlled by admin | <input checked="" type="checkbox"/> Audit tracking approved equivalent courses |

Where is CEB™ being used?

CEB™ is currently in use in the 32 Minnesota state colleges and universities. Additionally, the U.S. Department of Defense is in the process of installing CEB™ in several of its defense universities.

How do I get my school's course information into CEB™?

If you are a CAS user, we provide the scripts that allow easy download of the course equivalent information into CEB™.

If your course information is in another format, we work with you to provide an automated solution to building your CEB™ database.
